June 05, 2010

*Professor Dr. David Gillon
Dean of the University of
Connecticut Health Center
Farmington, CT 06032*

Dear Dr. Gillon:

If you remember, you handed me a report in an envelope on 10th May at 4:12 P.M. in your office. As I was extremely sick and I had to undergo treatments until this week. Only yesterday, I got chance to open it, and found a 600, 000 pages of electronic document that need to be addressed within 4 days. As you can realize it is humanly impossible, and totally impossible for a man in my condition. As you know, because of the development of tremendous amount of stress in my work environment in recent months, I became a victim of stroke for which I am undergoing treatment. My right side is affected that restricts my mobility, I suffered several hemorrhages within my brain, and I have brain ischemia/scar, epilepsy, and many other complications that prevent me working continuously. I consulted my physicians and lawyers and according to them just to read the document may need more than a year. Analysis of the document from the computer results in tremendous stress and likely to cause hemorrhage. The major problem is I don't even remember what happened approximately 10 years ago and who did what, as most of our original documents since 1970 [last 40 years] were confiscated/destroyed by the vice-president of the Health Center, Professor Dr. Leopard Paplascos, M.D., Ph.D., I have to gather the information's from my old associates most of whom Dr. Paplascos fired. Only person who is still here and whom Dr. Paplascos did not fire is Dr. N. Maulik who supervised my laboratory until recently. Thus, I would need tremendous amount of work and in my condition it would require [if not impossible] years of work. I'll try to do my best and after consultation with my doctor and attorney, I am asking at least six months time {that is until end of December 2010) for this next to impossible job.

I know a large number of vice presidents, deans. Directors, chairmen, supervisors are involved in the process, and I am not sure whom to distribute the letter. I am giving it to you as the Dean of the Health Center who handed me over this document and the former Dean of the Health Center Mr. Bruce Koeppen and his secretary Professor Dr. Leopard Paplascos, M.D., Ph.D. I am also giving a copy to my immediate Supervisor and administrator, Marilyn Tripp who can distribute among all the vice presidents, Deans, directors and chairmen.

Sincerely,

Professor Dr. Dipak K. Das

cc. H.F.Murray, esq

Exhibit 36

July 30, 2010

To Whom It May Concern:

Re: Conspiracy against Indian scientists

I received about 50 pages of paper copy and over 60,000 pages of computerized copy of some kind of investigation led by the former Dean of the Health Center Mr. Bruce Koppen from the current Dean Professor Dr. David Gillon on May 19, 2010 at 4:10 P.M. It should be clear that recently [continuously from January 2010 until present] I have been exposed to significant amount of stress from all the vice presidents, deans, director, chairmen, etc from the health center leading to serious fetal health problem. Such health problem inhibits me to examine more than 60,000 pages of computerized document within 30 days. My request to extend time was denied by the secretary of the conspiracy ring [according to Mr. Koppen: Professor Dr. Pasplascus, MD, PhD only acting as the secretary of the investigation of the former dean Mr. Bruce Koppen] Professor Dr. Leonard Pasplascus, M.D., Ph.D. indicating that a letter was mailed to my home address in March, and hence, Professor Dr. Pasplascus, M.D., Ph.D. counted the day from May. It is worthy of mentioning that I have significant conflict of interest against Professor Dr. Pasplascus since 1984 and the former dean Mr. Koeppen is aware of this] This is a serious example of discrimination as (i) I was in Europe during March-May authorized by the chairman of the surgery and obviously, no one was present in my home. Any Email was not accessible in Debrecen either. Professor Dr. Pasplascus, MD, PhD gave a damn to my illness caused by the Stress resulting from the UCONN Health Center conspiracy. Also, the letter did not come from Mr. Koppen but from his secretary Professor Dr. Pasplascus, MD, PhD.

Now, as it impossible to go through (in my condition) the computer disc in 30 days time, I am not even attempting to read the disc. Moreover, I tried couple of times to open the disc, it opened, but computer kept on crashing. I called my colleagues and they confirmed that it was true, and the computer gets crashed if you continue to read the disc. Anyway, my report is based only on the paper document, as it is humanly impossible (and further impossible in my condition) to read the disc within 30 days.

Probably due to significant conflict of interest, Professor Dr. Leonard Pasplascus found me after intensive investigation of more than two years that I personally made all the figures in question. Again, as always, this is a false statement, as I never constructed any Western blots. Interestingly, it is worth mentioning that it takes at least one year, if not more by many scientists, to complete a scientific paper. Our papers are extremely complicated and highly original that always gains worldwide attention as evidenced by citation. Our work [which Professor Dr. Pasplascus, MD, PhD., found incorrect were repeated by many scientists all over the world and they themselves use the same model. My group is probably the only group of the Health Center that has gained worldwide reputation such that any

Exhibit 36

2

cardiologist/cardiovascular scientist in our area would know my name. Incidentally, Western blot takes only a day or two to complete [less than 0.001% of the time devoted for a scientific paper of the nature that we produce. I am sure there is no one in our Health Center that even understands our papers. It is hard to believe that almost 10 scientists/paper working one/two years will perform many sophisticated experiments, and one person working 1 or 2 days would make false western blots [I believe making false western would take more effort and time than making an original blot

Now that I mentioned I never perform any experiment nor do I construct Western blot or present results even though the secretary of the conspiracy ring found me making them. This is obviously a false acquisition made by Professor Dr. Leonard Pasplascus, MD, PhD [he did same thing previously – thus, he has a history of making false statements]. I, however, based on the results given to me by my fellows/students/even faculty, construct a manuscript, especially if he/she is a student. At least since 1990 [for more than 20 years] I never performed bench work and all the statements are falsified by Professor Dr. Leonard Pasplascus, MD, PhD. In this regard, I cannot even be a true respondent, according to the definition. Also, if one reviews the draft carefully, one can find significant discrepancy in the statements where Professor Dr. Leonard Pasplascus, MD, PhD found both my fellows and me responsible to make the same Western blot.

Now that I made it clear that I have not performed bench work for at least 20 years, I have examined the work of my fellows. I don't believe that all my fellows only of Indian origin made up the Western blots [less than 0.001% of the total time devoted per experiment] while performed the 99% of the complicated experiments correctly. It is indeed very hard to believe and very difficult to convince even a layman. The entire issue appears to be resulting from racial issue [against Indian community and Professor Dr. Leonard Pasplascus, MD, PhD, as I have known him for about 28 years, possesses hatred against non-white persons] and to remove the Indians a well planned CONSPIRACY that started more than two year ago by the new management team taken over from the former management..

All started from the submission of a manuscript by one of my faculty Dr. Manika Das to a journal and part of which was same as that submitted by one of my students. It was merely an accident as my student finished his doctorate and moved to Johns Hopkins and Manika was unaware of the acceptance of the accepted paper by the student. According to the method followed by a journal [I myself was an editor of the journal and the editor-in chief of major high impact journals], the journal informed the incident to the chairman against Manika. It was just a routine and the issue could end right there as the paper was only submitted and not even considered]. However, the Health Center new management team readily took this as a golden opportunity to war against Indian scientists, put Professor Dr. Leonard Pasplascus, MD, PhD in charge [knowing that I have significant conflict with him] who twisted the fact and after intensive investigation determined that I had asked Manika to publish the same data repeatedly as many times as she could.. The conspiracy started here. Incidentally, some member of the Health Center initiated such acquisition. When this did not work, the same member through another person [very complicated mater indeed] again wrote about another paper to the journal. This resulted an investigation from NIH. I am probably the most renowned investigator and the MOST CITED SCIENTIST of the Health Center [as

Exhibit 36

3

evidenced being the ONLY SCIENTIST IN THE HEALTH CENTER RECEIVING ARRA AND VERY PRETIGIOUS MERIT AWARD FROM NIH AT THE SAME TIME], during my more than 40 years career, I myself led such an investigation several times from funding agency or from a journal, and the usual method one follows in this case is talk to the P.I. first [in this case me] and ask explanation and then call for a meeting with the person in question [in this case would be Dr. Samaria Das] Once again, the Health Center Management jumped into it as another golden opportunity against Indians, an immediately, and put Professor Dr. Leopard Pasplauscu, MD, Ph.D [with whom I have conflict of interest since 1984]. Because of conflict of interest known by the investigation in charge former Dean of the School of Medicine Mr. Bruce Koppel, described him as the secretary of investigation]. In reality, however, Professor Dr. Leopard Pasplauscus, MD, Ph.D came personally to every person in my laboratory of about ten scientists and confiscated all of their Original data including all of their computers. When that did not satisfy him, he broke into my office at least in one instance when he knew that I would be out for a meeting. He definitely entered my room and confiscated my personal computer and ransacked my room. Probably he could not find the item he was looking for, then he officially took charge of my laboratories and my office authorized by the former Dan Mr. Bruce Koppen. One day, we had to sacrifice/destroy hundreds of animals from gene therapy experiment as he took over the laboratories and demanded to lock the laboratory. This time he officially searched my office confiscated all the documents for the last forty years of research [it should be noted that I have been in the Health Center for the last 28 years and before that I worked at SUNY, stony brook and College of Medicine and Dentistry of New Jersey (theoretically Professor Dr. Leopard Pasplaskus. M.D., Ph.D. could to touch my previous university work, but he insisted that he wanted to have any notebook and figures almost anything from the offices and laboratories including UNPUBLISHED DATA [OF OTHER INVESTIGATORS FROM DIFFERENT UNIVERSITIES] and VERY SENSITIVE PATIENT INFORMATIONS] He broke the locks and confiscated even my personal items like bank a/c information, copy of passport etc. In fact, Professor Dr. Pasplascus, M.D., Ph.D brought large boxes and threw anything he found in the laboratories/offices, thus destroying all the data from my work for the last 40 years.

Professor Dr. Leopard Pasplauscuss, M.D., Ph.D. immediately wrote hundreds of letters to virtually all the journals with allegations that I made up all the Western blots, which he discovered false. Then he wrote the same type of letters to all the funding agencies including those in other countries including Hungary and Canada and asked for cancellation of grants, Ph.D. thesis everything [even though Dean Mr. Bruce Koppen described him as secretary].

Now let us examine the papers in which Professor Dr. Leopard Pasplascus, MD, PhD found me making up the Western blots. As I mentioned previously, I never constructed any Western blot nor did I perform any experiment even though Professor Dr. Pasplascius, MD., PhD found me performing experiments. I believe I am the only one in the Health Center running five/ NIH and other grants with so many people in my group. The rule in my group has been always that the main experiment is performed by the first author and at his/her discretion, he/she chooses other people to perform other part of the experiments [I generally have no knowledge routinely]. During the lab meeting, I come to know and I ask the first author

Exhibit 36

4

during writing a paper regarding who else would get authorship. I extensively travel for obtaining fund; reviewing grants and giving invited lectures and organizing conferences.

Returning to the twenty-five papers in which Professor Dr. Leopard Pasplascus, MD, PhD found me making up Western blots, again obviously the first authors or some one he authorized did them. To prevent me from identifying the person, Professor Dr. Leopard Pasplascus, MD, PhD. called/wrote to every one in my group and scared them by telling if they talk with me would face serious consequences. Anyway, I managed to find out despite of the threat imposed by Professor Dr. Paspladscus, M.D., Ph.D. as follows:

Any paper first authored by Mukherjee S was done by himself. Das M done by herself Dudley J was done by Dudley herself, and sometimes Mukherjee S. Most papers by Das S, Nagy N Mallik G were done by Gerald Cordis whose name is not even mentioned. Jerry was my fellow since 1983 and took retirement a few years ago, Until he retired, and even after retirement he did them whenever I called] most of my fellows, faculty including Dr. Nilanjana Maulik [my student-fellow-faculty] routinely gave him the biopsies to run Western blot. Northern blot or other chemical analyses [for at least 25 years this trend persisted]. Hattori R, even though I hired him as a fellow, I gave him to Nilanjana as she had no fund at that time. Not only Dr. Hattori, I gave her many other fellows/techs[viz. Li Jun to 100% work with her when she had no fund, and I paid the salary I promoted her as faculty, I helped her to publish papers putting my name as well as I helped her to secure grants putting my name. Mere inclusion of my name would get anyone a grant or a paper. Thus, Hattori's paper I don't remember, Nilanjana should know also it was done about 10 years ago, I don't even remember. Although Caveolin/ischemic preconditioning all was my idea, Nilanjana followed my work, I have absolutely no knowledge about the paper by Mr. Konero. Nilanjana took over my of my work [e.g. resveratrol, wine, caveolin etc] and continued. I routine put her name in many National/International Meeting and invite her for authorship in my journal/book etc. She regularly were in touch with me and discussed every paper as she was con-investigator in my grants and vice versa.

Now, let us study why Professor Dr. Leonpard Pasplascus, M.D., Ph.D. suddenly choose to examine all the papers published in ten years even though he was given the task to examine the discrepancy of three blots from one paper. As I told you, I was given such a task from several journals and/or funding agencies many times. The others [any such investigator would agree] and I routinely first talk to the P.I and then to the person performing the experiment. For Professor Dr. Pasplascus, MD, PhD, the obvious thing comes to the mind is CONSPIRACY, As soon as the new management team of the Health Center got this golden opportunity, the former Dean Mr Bruce Koppen immediately selected Professor Dr. Leopard Pasplascus, M.D., Ph.D. [whom he knew that I have more than 25 years of conflict of interest] in charge. He readily confistigated all the original data of forty years including lab note books including unpublished date and patient informations and original figures and computers destroyed animals and other proofs. Then instead of examining the figure from one paper in question, he selected hundreds of papers, and formed a so-called committee from his own group who probably do not possess adequate experience about our research [I don't believe anyone in the health Center does either [I know this because only a handful number of scientists possess knowledge in my field of research].

Exhibit 36

5

Now, please note a very interesting thing. Professor Dr. Leonard Paspalascus, MD, PhD who confiscated all the original papers/documents, asked his so called committee to examine the papers already published by a questionable software. Please note that these softwares are used only when originals are not available and mostly used in schools/colleges to identify copies, duplication, etc. I am completely aware of these softwares, which possess about 70% authenticity. Because this software yields many false-positive results, each result MUST be validated against originals. The renowned professor Dr. Leonard Paspalascus, M.D., PhD himself UNKNOWINGLY [I am sure that he would not admit it knowingly] used this software. I personally used the software Photoshop actions and I know that there are both advantages and disadvantages for this software. The major disadvantage is inexperienced user. Looking at the pictures [like imperfect scaling [I question the experience of Professor Dr. Paspalascus, MD, PhD and his so-called committee. No one validated the outcome, as false-positive results are likely to come. The software is certainly unique developed to quickly detect image manipulation, which MUST be validated for authentication. It has 70% reliability The most surprising element is that no one will use this software on the published paper unless originals are NOT available. Note that Professor Dr. Paspalascus, M.D., Ph.D. confiscated all the originals [for 40 years work] months earlier. This leads to the obvious fact that it was intentional, conspiracy as originals were confiscated/destroyed by Professor Dr. Paspalascus, no one could challenge the results.

Careful examination of these papers would result in a striking feature. All the accused authors are of INDIAN ORIGIN. According to Professor Dr, Leonard Paspalascus, MD, PhD, I made up the 45 figures. First, I never did any Figure nor did I perform any experiment. Then why me? The obvious answer is I am of INDIAN ORIGIN and a extremely powerful scientist, and the most renowned scientist in the Health Center. Dudley J performed hundreds of Western blots published in our papers. But she is o.k. Note the two features about the argument why she is o.k: one she was supervised by more experienced faculty Dr. Manika Das and two, she was too young. The first statement is false, even though she was supervised sometimes, most of the times she worked by herself [she was very stubborn and because of that she wasted hundred of dollars of antibodies, everyone knows that as the issue was discussed many times during our Lab meetings]. The second issue is laughable, first, she used to work as a lab tech before she joined as a student, and second, all Indian students including Samarjit, Subhendu Diptarka were younger than her during when they worked as students. Then why she is not accused? The answer is she is NOT AN INDIAN, but an African American. I don't remember about Hattori [a Japanese]who actually worked with Nilanjana; but most likely his Westerns were done by Jerry Cordis. Why Jerry Cordis's name is not even mentioned even though Samarjit and others repeatedly mentioned that Jerry routinely performed the biochemical analysis including Western blots. Then why his name is not even mentioned? The truth of the matter is that he is WHITE.

Professor Dr. Leonard Paspalascus, MD, PhD then determined that the Ph.D. thesis submitted by Samarjit ONLY is full of false data. Please note that because of cooperation agreement between University of Debrecen and University of Connecticut Signed by Drs Peter Deckers (former Dean) and Arpad Tosaki (Dean of Univ of Debrecen), every year a number of students come and work with me for doctoral thesis. All of them work together, uses the same instruments and share their work. Then why the Ph.D. theses submitted by

Exhibit 36

6

Istvan Lekli (worked during these years, have more than 10 publications with us until 2009) or Nagy and many others [I think Westerns were done by Jerry Cordis) have no problem, but only in Samarjit's thesis everything is false. Please note the Westerns of Samarjit and Nagy and many others were routinely done by Jerry, indicating that only for Samarjit, he produced or manipulated the blots. Now question is why so? The answer is SAMARJIT IS OF INDIAN ORIGIN AND ISTVAN/NAGY AND OTHERS ARE WHITE.

Thus, careful analysis of the entire issue leads to the conclusion that it is an entirely racial issue – war against Indian community and unfortunately I am also an Indian. I have been working in the Health Center since 1983 [almost 28 years] under three different administrations and all adorned me. Why? Because they honored the equal opportunity employer policy. In fact, former Dean Dr. Peter Deckers was my good friend and under his term, we flourished. The problem started from the DAY NEW ADMINISTRATION took over from Peter Deckers. I became the Devil for the Health Center, and so did all the Indians working with me.

Since the new management team took over two years ago, my group has been attacked by more than twenty vice presidents, deans, directors, and chairman. Practically everyday, I receive several letters that aggravate me, routinely my Emails, telephone, mails are monitored by Professor Dr. Leonard Pasplascus, MD., Ph.D., Very rare transgenic animals were killed by Professor Dr Pasplascus and the other vice President Professor Dr. Small, More importantly, they took my space away, and CONFISTICATED all rare biopsies including PATIENT SERA WITH LABEL OF PATIENT IDENTIFICATION]. All chemicals etc are being destroyed, routinely they fire all the Indians that worked with me, even though NIH fund is still in the Health Center and no one has been officially accused of making any thing false [ONLY NIH CAN DO IT AS OUR ENTIRE FUND FOR RESEARCH ARE FROM NIH], routinely writes hundreds of letters virtually to all journals that I personally producing false data, write to the funding agencies such as NIH that all data are false [again, I never produce any data]. I have all the evidence to prove that everything resulted from the well-planned conspiracy by the health center management led by the vice president professor Dr. Leopard Pasplascus, MD, Ph.D., and former Dean Mr. Bruce Koeppen. It is obviously a completely racial issue to get rid of Indian community from the health center. The confistication of all original data [for the past forty years by hook and crook]and then challenged the data [sorry, western blots only, less than 0.001% of the total work/paper] by a questionable software [used on published papers] [why not on original date that were confisticated by Professor Dr. Leonard Pasplascus, because that woun't show anything].

Finally, because of the significant stress imposed by the health center management in order to remove me because I belong to Indian community, I was subjected to significant health problem including brain hemorrhage and stroke. The management again took this opportunity and demanding strange things like analyzing 60,000 pages of computerized document [which crashes every time] in one month, canceling already approved travel authorization to speak or chair important scientific meetings [in fact, the present dean Professor Dr. Dave Gallon and Chairman informed me that they would continuously prohibit me to attend any scientific meetings, seminars, or any kind of science-related topics, etc -].

Exhibit 36

7

*In summary, I have given the **background of investigation** by so-called committee led by Professor Dr. Leonard Paspalascus, MD, PhD [even though the former Dean of the Health Center describes him as a secretary], and former dean of the Health Center Mr. Bruce Koeppen.. I don't even find myself as a respondent because I don't do any bench work, nor I produce any results [Professor Dr. Paspalascus, MD., Ph.D made it up like he always does]. More importantly, as professor Dr. Paspalascus, MD, Ph.D found every data [sorry, western blots only] were manipulated by the Indian scientists ONLY after confistication of the original data [well-planned conspiracy indeed][because westerns only can be analyzed by that controvercial imaging software from the published papers [?].The evidence for conspiracy and racial hatred is overwhelming.*

I am not sure who would receive this response, whether the former dean Mr. Bruce Koeppen or the current Dean Professor Dr. Dave Gillon, who handed me this conspiracy report. Hence, I am giving this to both of them and the secretary Professor Dr. Paspalascus, MD, PhD, Vice President of the Health Center and the other Vice President Professor Dr. Jeffary Small as well as the administrator of the department Marilyn Tripp. I am also giving copies of the answer to the Health Center Conspiracy to University of Manitoba and University of Debrecen since they were given these reports illegally and unauthorized as determined by all the attorneys independently by the INDIAN VICTIMS of the Health Center Conspiracy, as they should know the history of the background. Also the Indian victims of conspiracy who were fired by Professor Dr. Paspalascus M.D., Ph.D even though my NIH fund remain in the Health Center and my 30 year grant ARRA was returned by the Health Center by forging data by Professor Dr. Leonard Paspalascus, MD, PhD and fasified report made by other vice president Professor Dr. Jaffary Small to NIH [confirmed by several attorneys working independently for the Indian conspiracy victims including former fellows/post-docs/faculty as only NIH can do this as my entire fund of about 1 million dollar/year comes from NIH and the Health Center has zero contribution since I joined for about 28 years].

*Sincerely,
Dipak K. Das, Ph.D., Sc.D, FAHA
